

Fact Families

Complete each fact family.
Use cubes if you like.

Most fact families
have 4 facts.

$$\underline{3} + \underline{4} = \underline{7}$$

$$\underline{7} - \underline{3} = \underline{4}$$

$$\underline{4} + \underline{3} = \underline{7}$$

$$\underline{7} - \underline{4} = \underline{3}$$

$$\underline{\quad} + \underline{\quad} = \underline{\quad}$$

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

$$\underline{\quad} + \underline{\quad} = \underline{\quad}$$

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

$$\underline{\quad} + \underline{\quad} = \underline{\quad}$$

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

$$\underline{\quad} + \underline{\quad} = \underline{\quad}$$

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

Problem Solving Algebra

Write the missing signs to finish the fact family.

4. $8 \bigcirc 2 = 10$

$10 \bigcirc 8 = 2$

$2 \bigcirc 8 = 10$

$10 \bigcirc 2 = 8$

Write a fact family for each number bond.

Example

$$\underline{3} + \underline{6} = \underline{9}$$

$$\underline{6} + \underline{3} = \underline{9}$$

$$\underline{9} - \underline{6} = \underline{3}$$

$$\underline{9} - \underline{3} = \underline{6}$$

$$\underline{\quad} + \underline{\quad} = \underline{\quad}$$

$$\underline{\quad} + \underline{\quad} = \underline{\quad}$$

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

$$\underline{\quad} + \underline{\quad} = \underline{\quad}$$

$$\underline{\quad} + \underline{\quad} = \underline{\quad}$$

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$

$$\underline{\quad} - \underline{\quad} = \underline{\quad}$$
