

### Fact Families

Complete each fact family.  
Use cubes if you like.

Most fact families  
have 4 facts.

$$\underline{3} + \underline{4} = \underline{7}$$

$$\underline{7} - \underline{3} = \underline{4}$$

$$\underline{4} + \underline{3} = \underline{7}$$

$$\underline{7} - \underline{4} = \underline{3}$$

$$\underline{6} + \underline{2} = \underline{8}$$

$$\underline{8} - \underline{2} = \underline{6}$$

$$\underline{2} + \underline{6} = \underline{8}$$

$$\underline{8} - \underline{6} = \underline{2}$$

$$\underline{5} + \underline{4} = \underline{9}$$

$$\underline{9} - \underline{4} = \underline{5}$$

$$\underline{4} + \underline{5} = \underline{9}$$

$$\underline{9} - \underline{5} = \underline{4}$$

### Problem Solving Algebra

Write the missing signs to finish the fact family.

4.  $8 \oplus 2 = 10$

$10 \ominus 8 = 2$

$2 \oplus 8 = 10$

$10 \ominus 2 = 8$

Write a fact family for each number bond.

Example

$$\begin{array}{r} 3 + 6 = 9 \\ 6 + 3 = 9 \\ 9 - 6 = 3 \\ 9 - 3 = 6 \end{array}$$

$$\begin{array}{r} 3 + 7 = 10 \\ 7 + 3 = 10 \\ 10 - 3 = 7 \\ 10 - 7 = 3 \end{array}$$

$$\begin{array}{r} 5 + 3 = 8 \\ 3 + 5 = 8 \\ 8 - 5 = 3 \\ 8 - 3 = 5 \end{array}$$
